DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, drawn to Power Generator, classified in class 310, subclass 254.
 - II. Claims 13-15, drawn to Over-voltage protector, classified in class 310, subclass 196.
 - III. Claims 16-19, drawn to a High voltage coil, classified in class 310, subclass 182.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II-III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the power generator of group one can be made without conductive strips and conductive stands. The subcombination has separate utility such as the components of other dynamoelectric machines: armature bars, rotor slots etc.
3. During a telephone conversation with Daniel Stout on 2/19/02 a provisional election was made with traverse to prosecute the invention of a Power Generator,

claim1-12. Affirmation of this election must be made by applicant in replying to this Office action. Claim13-19 is withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Allowable Subject Matter

4. Claims 2-6 and 8-12 allowed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claim 7 is rejected under 35 U.S.C. 102(b) as being anticipated by Nieves (5323079).

Nieves discloses in fig.5 a high voltage stator coil for a stator of a power generation system the stator comprising: a plurality of metal strand (54,60). a plurality of vents members(50)positioned adjacent the plurality of metal strands(54,60); and compact voltage grading means(the-metal vents 50 and Conductor 80) contacting each of the plurality of vent members and the plurality of metal stands for grading voltage between the vent members and the metal strands to thereby prevent an over-voltage condition

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nieves.

As seen above in paragraph (6), Nieves teaches substantially the same invention, except a rotor. However, it would have been obvious to one having ordinary skill in the art the time the invention was made that the electrodynamic system of Nieves would comprise a rotor.
